

Lab: LLM Agents

Objective: Build an autonomous research agent.

Task 1: Tools Setup

- Get API key for Tavily (Search) or set up a mock search tool.
- Define a Python function `search(query: str)`.

Task 2: Agent Loop

- Use LangGraph or raw Python loop.
- Prompt: "You have access to tools. Use them to answer."
- Parse LLM output -> Execute Tool -> Feed back result.

Task 3: Complex Query
